Appl. Of: Tsutomu KADOTANI et al Preliminary Amdt. dated November 30, 2004

In the Specification:

In the Abstract:

Page 26, lines 1-13, please replace the abstract with the following (note no text changes are made, the existing text is merely put into the form of a single paragraph):

A tensioned end of a prestressed-concrete structure is constructed easily and reliably. A grout can 5 in a tensioned end structure of a prestressed-concrete structure is made of a transparent material, particularly preferably a transparent electrically insulating material, thereby reliably performing grouting while visually observing and checking the filling condition of grout G in the grout can 5 from the outside thereof. A synthetic resin, particularly an ionomer resin, is preferably used as the transparent electrically insulating material constituting the grout can.
